

What is CentOS?

CentOS is a rebuild of Red Hat Enterprise Linux.

The CentOS Project is a community-driven free software effort focused on delivering a robust open source ecosystem. For users, we offer a consistent manageable platform that suits a wide variety of deployments. For open source communities, we offer a solid, predictable base to build upon, along with extensive resources to build, test, release, and maintain their code.

Special Interest Groups - SIGs

- ✓ Build, test, and package projects that run on top of CentOS
- ✓ Ensure that packages interoperate with packages from other SIGs
- ✓ Encourage a diverse ecosystem of solutions for CentOS users

Why use it?

CentOS is great for anywhere that you want to use Linux in your enterprise infrastructure. If you want something faster moving, consider Fedora. If you want support, consider Red Hat Enterprise Linux.

Where do I get it?

Download CentOS at <https://centos.org> and get started today!

Join the community!

CentOS and all the related open source projects are built by volunteers. Join our user, developer, and SIG mailing lists to participate. Details at <https://wiki.centos.org/GettingHelp/ListInfo>

Meet the community at one of our events. The list of our upcoming events is at <https://wiki.centos.org/Events>
